The Many Uses For The Orange Peel

As soon as you break the skin of an orange, its sweet-tangy scent fills the air. Many, anxious to get to the juicy segments of the orange itself, consider the peel's job done and discard it in the nearest compost bin. As some have now realized, once the orange is consumed, the orange peel has many uses all on their own. The most effective orange peels to use is that of an organic orange, but other orange peels will still do the trick.

In the Kitchen:

▶ One use for orange peels is as a dried seasoning. Orange peels can be scraped across with a specialized kitchen grater called a zester. The zester removes only the thin upper layer of the orange peel, not the lighter colored pith. The grating action creates a pile of orange zest, which is usually left to dry overnight before being stored in an airtight herb bottle. Orange zest is often used to enhance other flavors in desserts, gravies, and even some meat dishes. Dried orange peels can also be sprinkled as a garnish.

▶ Orange peels can be used to make delicious homemade oils. Place some orange peels and cranberries in olive oil and close it with a cork. You can observe a wonderful flavor to the oil after some weeks.

▶ Placing a piece of orange peel in a container of brown sugar will help keep it from drying out.

▶ Deodorize your kitchen sink by running orange peels through the garbage disposal to freshen up a stinky garbage disposal. Also by adding a few ice cubes will help sharpen the disposal blades.

▶ Use a fresh orange peel to scrub your sink. The natural oils in the orange peel are an excellent cleaner and gives a nice shine to your sink too.

Around the House:

▶ Another use for orange peels, is air freshening. Combing dried orange peels, cinnamon sticks, lemon peels and flower petals in a simmering pot of water. As the steam leaves the potpourri, the air should become much more scented. For safety purposes, keep an eye on the pot and do not leave it boiling unattended.

▶ Orange peels can be tastefully cut and added to dried flower arrangements for extra color, shape, and style.

▶ Dried orange peels can be stored in a cheesecloth bag and kept in closets, drawers or cupboards to help reduce musty odors.

▶ Rubbing the leaves of your house plants with orange peels once a month and placing some orange peels on the surface of the soil in potted plants will help prevent you cat from destroying them.

▶ One unusual use for dried orange peels is as kindling for fires. The orange oils found in the peels are indeed flammable and corrosive, but they burn more slowly and steadily than common kindling material such as newspaper. Orange peels also have the advantage of creating a pleasant odor as they burn. It may be convenient to keep a heat-resistant bucket near the fire place as a collection point for discarded orange peels

Outside the House:

- ▶ Placing orange peels at the bottom of your garbage can before putting in a garbage bag is said to reduce odor and also help discourage insect infestation.
- ▶ Rubbing orange peels directly on the skin can be an effective mosquito repellent . Insects in general find the odor of orange oil offensive.
- ▶ Some experts suggest that a mixture of dried orange peels and coffee grounds will discourage neighborhood cats from using a homeowner's yard as a litter box. The overpowering smell of orange oil and coffee overrides their usual litter box signals.
- ▶ Taking a few orange peels in a cup of warm water and make a puree in a blender. Pour this solution into anthills to prevent ants or anywhere around the house that you do not want ants to be.

Gardening:

- ▶ If you are throwing away the orange peels, consider adding them to a compost pile if you have the space and use for fresh, healthy soil. Orange peels can make your soil extra fertile.
- ▶ Spreading some orange peels around the surface of the soil in your garden is an effective method of getting rid of slugs.

Health and Body:

- ▶ Dried orange peels can be used as homemade bath oils.
- ▶ Orange peels are rich in vitamin A and C, both which are natural antioxidants that boost the overall health of the immune system and help fight infection, colds and flu
- ▶ Orange peels have more phytonutrients and flavonoids than the inner pulp, endowing it with anti-inflammatory properties that can aid in digestion and relieve gastrointestinal problems such as acidity, heartburn and the digestion of fatty foods.

Extracting Orange Oil

Orange oil is being used in many cleaning products these days for its pleasant aroma and powerful solvent properties. As an essential oil, it has many health-related benefits. If you'd like to have a go at making your own orange-oil extract, try this: Note: because this process uses solvents, wear gloves, keep out of reach of children and naked flame and the same applies for the finished product. Orange oil is flammable and very corrosive.

For most cleaning purposes, a quarter of an ounce (7mls) mixed in with a quart (1 litre) of water should be sufficient.

- 1- Dry the orange peels
- 2- Grind the peels
- 3- Place into a mason (glass) jar and cover with grain alcohol (even vodka will do)
- 4- Shake vigorously for a few minutes. If possible repeat this over a couple of days. Warmed alcohol will help yield more oil.
- 5- Strain mixture through a coffee filter
- 6- Place mixture in a shallow dish, cover with a material that will breathe and allow alcohol to evaporate. What's left is orange oil.

The Many Uses For The Orange Peel Quiz

1) Orange Peels are rich in
