Legend:

X Suppressed to meet the confidentiality requirements of the Statistics Act

.. Not available

Footnotes:

1 Data previous to 1971 see CANSIM table 002-0014.

2 Beginning in 1972, Newfoundland and Labrador is included.

3 Less than \$500 is reported as 0.

10 Formerly referred to as 'Other vegetables'.

8 Prior to 2001, receipts from grapes and blueberries were included in Other berries and grapes. The categories Other berries and grapes and Strawberries, taken together, are equal to Total small fruits.

9 The category Total small fruits comprises receipts from the sale of numerous small fruits. Blueberries, Strawberries and Grapes are the major sub-components of Total small fruits.

7 As of 2001, receipts from Wool, Pregnant mare's urine, Horses and Embryos are accounted for in Miscellaneous livestock and livestock products.

5 As of 1992, crop insurance payments no longer include payments under private hail insurance plans.

6 Generally, these are programs to deal with unusual climatic and/or economic conditions in the agriculture sector. Starting in 1999, payments under the Western Grain Stabilization, Tripartite Plans and the Gross Revenue Insurance Plan are included in other payments.

Footnotes:

- 1 Data begin in 1926 for Canada and all provinces except Newfoundland and Labrador for which data begin in 1972.
- 2 For data prior to 1971 see CANSIM table 002-0015.
- 3 Starting in 1986, the following were combined: cash wages and room and board; repairs to buildings and repairs to fences; fertilizer and lime expense; fertilizer and lime rebates. Starting in 1990, legal and accounting fees were taken out of other expense. As of 1997, hatcheries and farms with only christmas trees became part of the agriculture sector. The inclusion of hatcheries has increased all expenses except poultry purchases.
- 4 The total operating expenses after rebates includes all gross operating expenses minus rebates.

The Farm Input Price Index (FIPI) measures the change through time in the prices received for agricultural commodities at the first transaction point. Much of the price information used in compiling the index is obtained from surveys of farm respondents throughout Canada. Where possible, administrative data are used as price sources in order to reduce response burden. The prices used in computing the index are, as closely as can be determined, the transaction prices received by farmers when ownership first changes hands. These prices include any bonuses and premiums which can be attributed to specific commodities, but they exclude any storage, transportation, processing and handling charges which are deducted before the farmer is paid.

Legend:

x Suppressed to meet the confidentiality requirements of the Statistics Act

Footnotes

The Farm Input Price Index (FIPI) estimates the change in price that farmers pay for inputs into their farming operation through time. A range of 1 administrative price sources are used to calculate this estimate.

2 Additional information can be obtained from our Dissemination Unit at the following Internet address: ppd-info-dpp@statcan.gc.ca.

Footnotes

7 Export numbers from International Trade Division of Statistics Canada have been adjusted using secondary information to more accurately reflect province of origin. Canadian export totals remain unchanged.

5 Slaughter principally represents slaughter on a province of origin basis and may include hogs destined for export; varies by province.

3 A residual is arrived at by taking the number of animals leaving for farming operations outside that province minus the number of animals coming to farms within that province.

Footnotes

The production and value of aquaculture includes the amount and value produced on sites and excludes hatcheries or processing. Shellfish also includes some wild production.

- 1 The data are collected from each of the provincial departments responsible for aquaculture.
- 2 Sales to outfitters: operations offering lodging and services for hunting, fishing and trapping.
