Guiding your journey through cancer care

How can the **Cancer Patient Navigator help?**

The diagnosis of cancer can be a difficult time. You must make many decisions, learn about cancer and consider treatment options. A Cancer Patient Navigator can help you and your family understand the many challenges you may face and questions you may have about your journey.

The **Cancer Patient Navigator can:**

- Provide access to information booklets, websites and support groups relevant to your cancer diagnosis.
- Help you understand and answer questions about what to expect during your appointments and treatments.
- Connect you with other health care professionals such as social workers, dieticians, homecare and spiritual care counselors who can also support you.
- Provide assistance with financial concerns, travel and transportation or medication costs.
