## Home Energy Low-income Program (HELP)

Low-income clients who have an ecoENERGY Energy Efficiency Evaluation completed are eligible to have a HELP tradesperson complete comprehensive air-sealing (caulking and weatherstripping on windows and doors) that was identified in the audit report free of charge. This would be to achieve the \$150 air sealing eligible improvement grant.

Other features of the HELP program include:

- installation of a programmable thermostat,
- a low-flow shower head,
- a voucher for a free furnace cleaning (up to \$80 value).

There are simple energy measures that you can take that can have a big impact in reducing the amount of oil needed to heat your home and save you money on your home heating costs. The results will vary depending on the current condition of your home – installing a programmable thermostat can save up to \$250; and sealing air leaks with caulking and weatherstripping on windows and doors can save as much as \$650.

**Low-income clients also qualify for the PEI ecoENERGY Audit Assistance Program for Low-income Households in which the Provincial Government will pay for both the pre- and post-retrofit audits in full.**
